

Moon Watch Flip Book

Print out a copy of the Moon Watch Log (attached).

Over the next month, draw your observations of the Moon each night, using the circle to record what you see.

Note the date, time, and weather each night as you make your drawing. Some nights you may not get a clear view of the Moon because of clouds. You can always check online or in the newspaper to see what the Moon looked like that night.

If the Moon looks a little red or orange one night, draw this too. You might want to use some colored pencils to make an accurate picture of the Moon.

Once you've completed 29 days of observations, you are ready to make your Flip Book.

Cut each page of your journal along the dotted lines.

Make sure they're in the right date order, with the earliest day on the bottom.

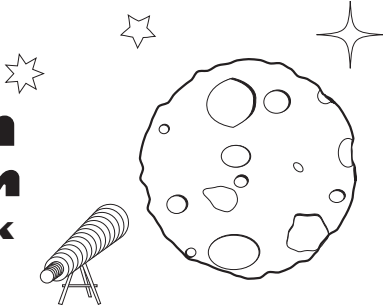

Line up each slip of paper so the Moon circle is on the right side, and the date, time, and weather information is on the left. Clip or staple the pages together on the left side.

You can now see the Moon pass through all its phases in just a few seconds.
Talk about instant replay!
